

We're Running Marketing Ads in Your City

Patients may be **contacting you at the front desk soon.**

Tenex Health is running digital ads to inform patients about *Tenex Health TX®* and encourage them to schedule a consultation with a treating physician. Are you ready to answer questions and capture appointments?

Understand which
conditions your clinic treats
with *Tenex Health TX® Technology.*

For more information, speak with the treating physician in your office.

Tenex Health, Inc., 26902 Vista Terrace, Lake Forest, CA 92630

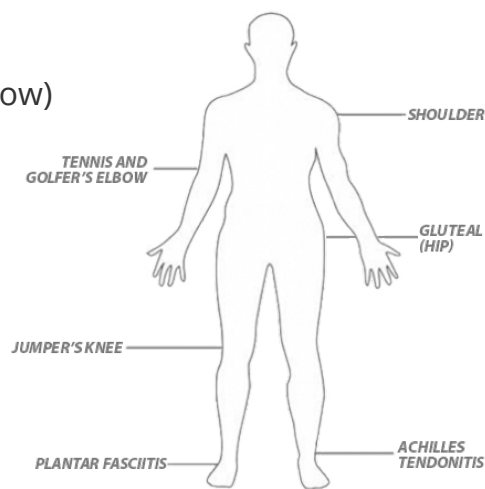

Corporate contact: 949.454.7500 / 855.2 TENDON | www.TenexHealth.com

For further assistance, contact info@tenexhealth.com.

The Tenex Health TX® System is minimally invasive technology used to treat conditions such as:

- Shoulder Tendonitis (Rotator Cuff or Biceps)
- Lateral or Medial Epicondylitis (Tennis/Golfer's Elbow)
- Gluteal Tendonitis (Hip)
- Pelvic Hamstring Tendonitis
- Patella Tendonitis (Jumper/Runner's Knee)
- Achilles Tendonitis (Ankle)
- Plantar Fasciitis (Foot or Heel)
- Calcific Deposits
- Bone Spurs or Bony Prominences
- Diabetic Foot Ulcers

How does it work? When conservative treatments fail, it is used to precisely remove and treat the pain-causing tissue. Patient benefits include:*

- Rapid pain relief and return to normal activities within 6-8 weeks (compared to 6 months or more with an open surgical procedure).
- Typically performed with local anesthetic.
- No stitches (requires only a small, adhesive bandage).
- Stimulates a healing response in the tendon.
- Clinically proven to remove or lessen tendon pain in over 85% of patients.

**Data on file; Individual results may vary.*
